Smart Kitchen

- Building an IoT - based simulated android app which will help you to make your kitchen smarter.

- Automatic sending orders to favorite shops.

- Getting status of your current kitchen supplies on your mobile phone as texts

- Generating many dashboard table charts for a user supply usage details over a month or week giving the user chance to speculate on his/her usage habits.

What We Have Done

1. ENY Button Integration with NodeJS
2. Android app with fully functional and user friendly interface.
3. Neura SDK integration with app to know which user is nearer to the shop.
4. Facility to favorite a Store and Option to make many stores available.
5. Text Message alerts to the Registered Mobile Number.
6. Facility to register/deregister ENY device on the app.
7. Login Facility/ Heroku Deployed Nodejs server and MongoDB database dynamically available on Mlab.
8. Facility to register new containers on server. ID maintenance and
